FROM AI-ASSISTED DELIVERY TO AGENTIC INVESTMENT WORKFLOWS

TWO AGENT SYSTEMS. ONE ACCOUNTABLE HUMAN.

I led agents that built the product, then designed agents inside the product.
In both cases, the human owns the brief, quality bar and final decision.

1 AI to build the product

As product lead, I defined the vision, UX, source hierarchy, agent mandates and quality gates. Claude Code specialists supported product framing, architecture and implementation; Cursor added independent review. I used reusable skills and the Impeccable, Anthropic Product Management and ECC plugins, with MCP-aware tool integration in the working model.

LOOP ENGINEERING / ROUGHLY 40 SCOPED LOTS

FRAME | DELEGATE | BUILD | TEST | REVIEW | DECIDE

I split work into bounded outcomes, ran targeted tests and reviews, corrected the result, and closed each lot by decision. Smaller lots, focused context and proportionate regression helped control token consumption without removing the human gate.

Quality and safeguards

Testing policy, source-of-authority rules, independent review, penetration tests and a maintainability audit. Sensitive actions and unresolved trade-offs return to the human; quality gates make the delivery loop repeatable.

PRODUCT / DELIVERY STACK

Python · Next.js · React · TypeScript · Node.js worker · PostgreSQL · model API · Docker

WHY THIS MATTERS

I have led AI coding workflows and designed a governed, multi-agent business workflow - a practical bridge between developer tools and enterprise work agents.

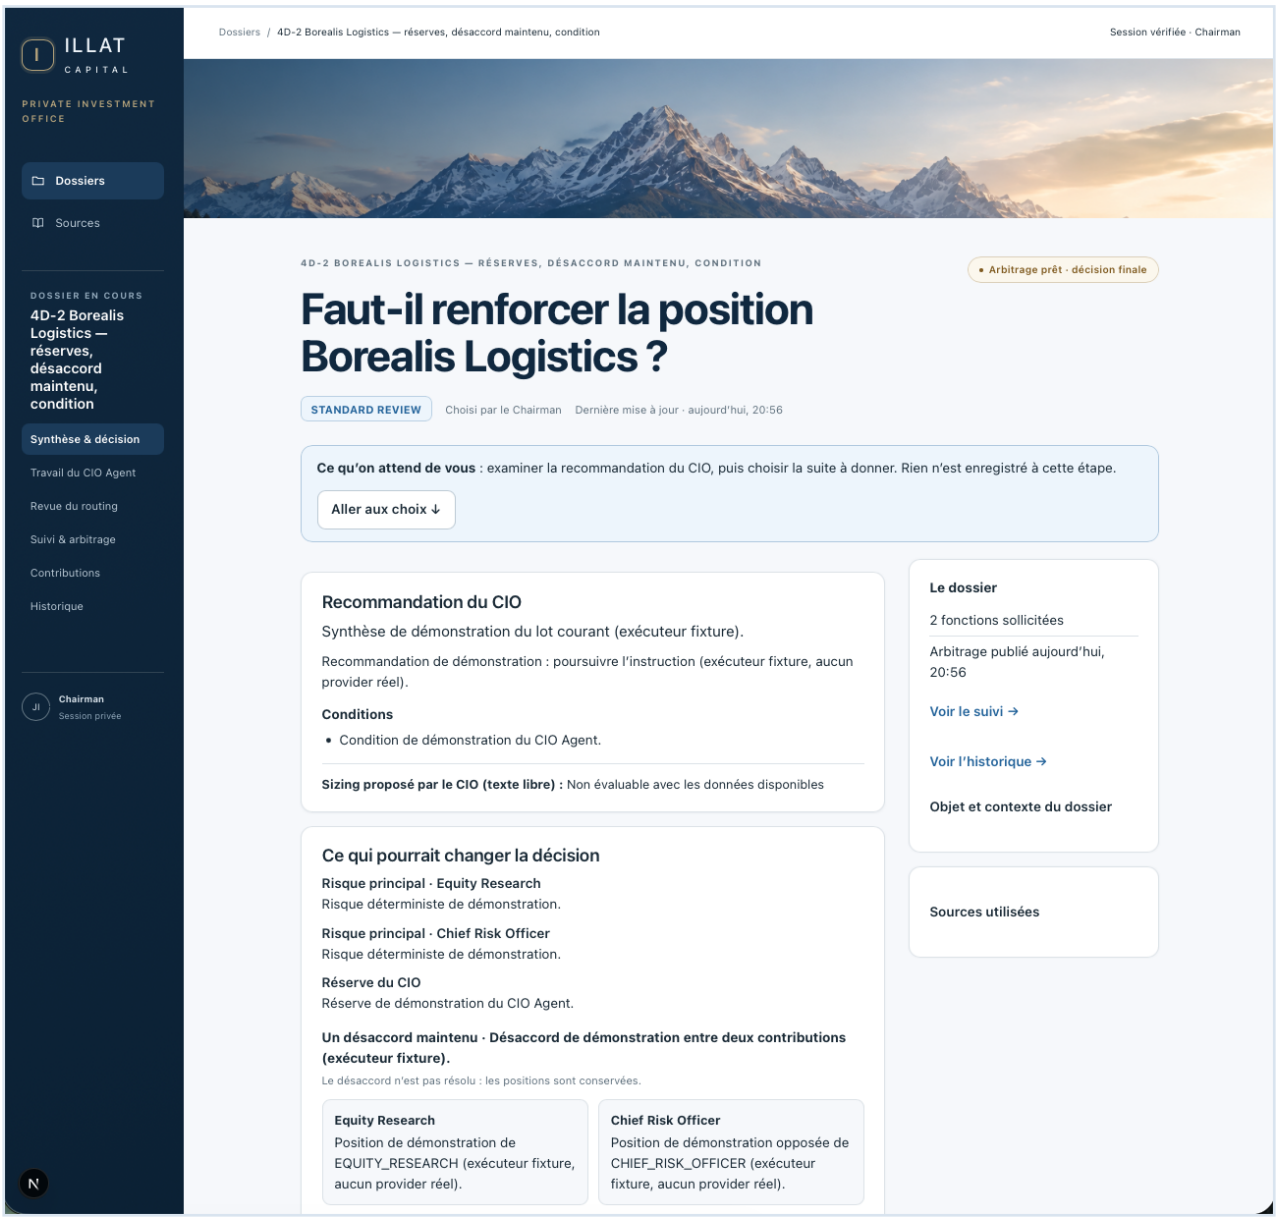

2 AI inside the product

A Chief Investment Officer agent routes each case to the specialists needed: Macro & Market Strategy, Equity Research and Chief Risk Officer. It synthesises a provisional view while keeping risks, conditions and disagreement visible. The human Chairman alone makes the final investment decision.

DESIGN CHOICE

Show what could change the decision - not just a polished recommendation.

The complete decision screen

Representative synthetic case (Borealis Logistics). The screen is shown in full. Its text uses a fixture executor; it illustrates the decision experience, not live investment performance.
